

Homework: Simple Linear Regression

Legesse Kassa Debusho, UNISA, South Africa and Ziv Shkedy,
Hasselt University, Belgium

April 5, 2017

Table of contents

1 The cars data

2 The airquality data

The data

- The cars data give the speed of cars and the distances taken to stop. Note that the data were recorded in the 1920s.
- Use

```
> help(cars)
```

To get information about the data.
- A scatter plot of the car's speed versus the stopping distance can be produced by `speed, dist`)

Modelling

- The cars data give the speed of cars and the distances taken to stop. Note that the data were recorded in the 1920s.
- Use

```
> help(cars)
```

To get information about the data.
- A scatter plot of the car's speed versus the stopping distance can be produced by `speed, dist`)

The data

- The `airquality` contains information about the daily air quality measurements in New York, May to September 1973.
- Use
 - > `help(airquality)`
 - To get information about the data and variables.
- A scatter plot of the car's speed versus the stopping distance can be produced by `speed, dist`)

Modelling

- The cars data give the speed of cars and the distances taken to stop. Note that the data were recorded in the 1920s.
- Use

```
> help(cars)
```

To get information about the data.
- A scatter plot of the car's speed versus the stopping distance can be produced by `speed, dist`)
